COMPANY BACKGROUND

Construction Industry in South Africa has become a major boast in creating employment opportunities, i.e.: Short term employment and long term employment. Contributing in economic growth has also seen the country doing well in terms of service delivery to our communities all over the country.

We place our emphasis on professionalism, quality and sustainability. our engineers have nationally and internationally recognized qualifications and our professional engineers are registered with the Engineering Council of South Africa (ECSA).

MAKHELENI CONSTRUCTION OFFERS THE FOLLOWING RANGE OF CONSTRUCTION SERVICES

- Civil Construction i.e.: water infrastructure, roads construction etc.
- Commercial And Residential Building, Alterations And Renovations.
- Housing projects.
- Retaining.
- Labour intensive Construction.
- Turnkey Design and Construction Services.

Makheleni Construction provides two types of safety training: labour on-site and management. Labour on-site safety training topics include: working at heights; scaffold erecting and dismantling; scaffold inspection; manual material handling; rigging and slinging; training in the use of electrical power and hand tools; and administering basic medical assistance (first aid). This training takes, on average, between two and three days to complete.

STRATEGY

The company strategy is to secure growth and reduce earnings instability within the construction sector by capturing multiple margin streams across the infrastructure value chain. This is achieved through product and geographic diversity and enhancing the supply chain.

QUALITY MANAGEMENT

At Makheleni, we take the quality of our work personally. We believe maintaining the highest standard is everyone's responsibility and we take great pride in what we build or construct.

We integrate quality within all our operation, from planning, design and scheduling to materials construction and environment practices, we build care and quality into every step. It's what our clients deserve and how we've earned reputation for delivering exceptional values.

MAKHELENI'S QUALITY MANAGEMENT SYSTEM PROVIDES VALUE TO CLIENT AND PROJECT STAKEHOLDERS BY

- Eliminating rework.
- Completing projects on schedule.
- Limiting deficiencies through our road to zero initiative.
- delivering tested and verified facilities and plants.

While we are still in the early stages of our sustainability journey, this section outlines our approach. Management accountability is integral to our approach to sustainability, but the board of directors is, ultimately, the responsible body for the organization. The board embraces the recommendation within the King Code of Corporate Governance Principles for South Africa (King III) that sustainability be integrated into the governance and strategy of an organization. Engaging with our stakeholders is also a key aspect of our approach to sustainability. We seek to elicit the views and concerns of stakeholders - including, but not limited to, shareholders, clients, suppliers, employees, analysts, regulatory authorities, civil society organizations and academics - and to incorporate these into our sustainability strategy.

HEALTH AND SAFETY OBJECTIVES

Construction is inherently a high risk activity and we recognize that we have a moral and legal obligation to safeguard and protect the well being of our people. We strive for a work Environment that achieves 'zero harm', which means operating without fatalities and the minimum of lost-time injuries. We also recognize that our Occupational Health and Safety (OHS) responsibility extends beyond employees and encompasses every stakeholder involved on any of our projects. The board assumes overall responsibility for the safety of our employees and stakeholders through the Social and ethics committee and each operational manager assumes

responsibility for safety within their individual business units, ensuring that the company Safety Management System OHSAS 18001 and company OHS policies and procedures are implemented on every project.

SAFETY MANAGEMENT SYSTEM

Makheleni "Safety Management System" (SMS) ensures that our approach to safety is documented and methodical. Based on a comprehensive set of explicit procedures and records, the SMS defines how risk is identified and managed by the company. The objective of the SMS is to improve our safety performance continuously through the seamless integration of planning, implementation and performance review processes.

ESTABLISHING A CULTURE OF SAFETY

We also recognise that policies and procedures alone do not create a safe working environment and continue to entrench a culture in which our employees assume responsibility for their own safety. We are also working to extend this culture outside of work - at home and with their families - by making safety an automatic, innate consideration.

We also have an incentive programme in place that rewards employees and stakeholders when OSH targets and objectives are achieved on a project (typically, targets are set for every 300 000 injury-free hour tranches that are met).

Our Vision is to be the leading company in all engineering fields.

BBBEE OWNERSHIP

Makheleni Construction is a level 1 contributor and is a 100% black owned entity.

VALUE AND CULTURE

The interest of our clients are paramount. As an employee-owned company we firmly believe our success depends on delivering the highest level of quality and service.

OUR STATEMENT OF VALUES

Makheleni's people are our most important asset. We foster continual growth through career opportunities and provide investment clients, employees, consultants, subcontractors and suppliers will be treated with our high standard of integrity and reliability. We will strive to access new business opportunities within the broad strategy of our company.

OUR SERVICES

Makheleni Construction will take care of all your building, alteration and renovation projects. With our emphasis on professionalism and quality construction, we ensure that our client's building projects are well planned and executed within budget and to agreed schedules. we are certified by the NHBRC and our artisans are well trained to deliver finishes of an excellent standard.

Makheleni Construction also offers full project management services, in order to coordinate subcontractors and ensure that all parties adhere to strict health and safety policies and are managed to ensure progress to scheduled milestones.

KEY SERVICES

- Bulk Water Supply, Distribution And Storage
- 05.Dams, Canals, Pipelines And Rail Contracts
- Commercial Survey Services
- Milling Plants, Material Handling, Silos And Storage
- Water And Wastewater Treatment
- Bulk Township Services
- Port And Marine Facilities And Airports
- Precast Concrete Structures
- Landfill And Small Dam/Pond Construction
- Roads, Bridges And Interchanges
- Pre-Stressing And Specialized Engineering, Including Incremental Launching

DEVELOPMENT AND TRAINING

Whenever possible, we identify internal talent for development rather than hire from outside and have a policy of developing and promoting people from within the group. Investing in the development of our people is a pro-active way of ensuring the long-term success and sustainability of our business. Our focus is on ensuring all employees have access to training and development programmes that are relevant to their positions in the company and their personal growth.
